

PRESS RELEASE

Neugart introduces new right angle planetary gearbox

Thinking out of the box – even if there's not much room

The WPLFE from Neugart is the shortest right angle planetary gearbox with standardized flange interface and maximum torsional stiffness. This gives Neugart customers outstanding structural flexibility and a gearbox with uncompromising performance in spite of its compact dimensions.

At Neugart everything revolves around the customer. This was particularly true during the development and manufacturing of the new right angle gearbox WPLFE.

"Our customers have high expectations", says Sven Borho, Product Manager of the family-run company from southwest Germany. "It was therefore important for our new product to not only lead the market in terms of design but also in its performance."

And that has succeeded: The WPLFE is not just the shortest right angle planetary gearbox on the economy line. Depending on the size, it also requires up to 30 percent less space, is easy to install using the standardized flange interface, thus providing maximum flexibility.

Because of the larger diameter of the flange output shaft, the WPLFE achieves five times higher torsional stiffness compared to conventional series. This provides the user with an optimum and individual drive solution. The WPLFE has lifetime lubrication and delivers top performance.
